Re AB. 5681

Dear Robert Falkevitz and the Energy And Technology Committee,

Thanks for the opportunity to suggest to the Energy And Technology Committee a good point concerning Bill No 367; **An Act Concerning A Study Of Plugin Hybrid Electric Vehicles:**

THE POINT:

Please include in the definition of Hybrid Vehicle ANY LIGHT RAIL PUBLIC TRANSPORTATION VEHICLE. Sky Train Corp has developed such a Hybrid Plug-in for a next-generation monorail. It is important we establish this definition as an example to the Federal Government.

We are presently designing a **Mini Fuel Cell Substation** to power a Plug-in Monorail. This is vital to eliminate the fuel cell from traffic hazards while sustaining lower voltage through super capacitor storage systems which can flash charge vehicles in under 30 seconds. This will change everything.

We are bringing the Sky Train Monorail to four Connecticut cities. It will be exhibited first in Hartford at Adriean's Landing. We are working with UCONN on this.
